EDUCATION

Shanghai Jiao Tong University

2023.9 - 2027.6(expected)

B.S in computer science, **ACM Honors Class**

GPA(Core Courses): **3.94/4.3**

Selected courses:

- Algorithm Design and Analysis :**A+**, **98/100**
- Compiler Design and Implementation:**A+**, **99/100**
- Computer Architecture:**A+**, **97/100**
- Data Structure:**A+**, **97/100**
- Mathematical Analysis(Honor):**A+**, **95/100**

RESEARCH INTEREST

My major interest is **Robotics** and **Computer Vision**. Especially, at present, I'm interested in how to enhance model's perception of 3D structure and instruction following ability with multimodal data in the real world.

RESEARCH EXPERIENCE

RHOS (Yong-Lu Li, Ce-Wu Lu)

2025.6 - now

Our work focus on the precise manipulation with visual instruction and diverse tools adaptation, under the supervision of Yong-Lu Li and Ce-Wu Lu.

PROJECTS

Partial Rollout for LLM RL (LLM Course Project)

Spring 2025 [Link to Repo](#)

Decomposed the single rollout process into multiple turns and propagated unfinished rollouts to the next iteration, reducing the negative impact of long-tail rollouts.

- Achieved a 30% increase in overall speed without performance degradation.
- Implemented partial code and conducted experiments in collaboration with Zeng Ji and Li Zhiyan. Details in [PR 1826](#)

RISCV CPU (Course Project)

Fall 2024 [Link to Repo](#)

Designed a CPU in Verilog implementing the basic RISCV instruction set.

- Implemented branch prediction and instruction prefetching.
- Successfully executed on FPGA.

Mx Compiler (Course Project)

Summer 2024 [Link to Repo](#)

A compiler for Mx* (an educational language with basic features of C), as well as Clang (with `mem2reg` and register allocation).

- Implemented various optimizations including SCCP, DCE, inlining, GVN & GCM, loop detection, and unrolling.
- Utilized SSA graph coloring to allocate registers based on liveness analysis.

PAPERS

Automatic Tool Adaptation and Knowledge Transfer for Precise Manipulation *(in submission to CoRL 2026)*

Developing an efficient approach for **rapid tool adaptation** in precise manipulation tasks, leveraging prior demonstrations from common end-effectors to enable generalization to new tools with limited trajectories, as a co-leader.

- Transferring task knowledge from teleoperation data collected with conventional end-effectors to new tools for improved performance with few-shot adaptation.
- Enhancing model generalization and comprehensive capability in fine-grained manipulation tasks.

AWARDS AND HONORS

2023, 2024 Zhiyuan Honors Scholarship (2 % in SJTU)

STUDENT WORK AND TEACHING EXPERIENCE

Computer Programming, Teaching Assistant	2024 Fall
Data Structure, Teaching Assistant	2025 Spring
Principle and Practice of Computer Algorithms(AI), Teaching Assistant	2025 Summer
Vice Monitor of ACM Honors Class 2024	2024.9 - 2025.9

SKILLS

Programming	C++, Python, Java, Verilog,
Tools	Git, Solidworkers, ros2, L ^A T _E X
Languages	Chinese(Native speaker), English(Fluent)
